

## FIXING STRUCTURE OF AN ELECTRIC WHEELCHAIR SEAT

### ABSTRACT

5        An electric wheelchair includes a frame, and a seat; the frame has  
front and rear support rods projecting upwards from it, locating parts  
secured to the front support rods, and fitting parts secured to the rear  
support rods; each locating part has opposing guide trenches; each fitting  
part has lateral portions formed with opposing holes; the seat has  
10    engaging elements, and fitting elements secured to the lower side; each  
engaging element has a slide rod; each fitting element has opposing  
holes on lateral portions thereof; thus, the seat can be secured to the  
frame by means of passing pins through the holes of the fitting parts and  
the fitting elements after the slide rods are passed into the guide trenches,  
15    and after the holes of the fitting elements are aligned with the holes of  
the fitting parts.
